

BAREFOOT ACADEMY

BA-1132 (Online) Barefoot Runtime Interface and Packet Test Framework

Course Prospectus

BA-1132 is a Level-1 online, instructor-led course module that provides comprehensive, hands-on introduction to Barefoot Runtime Interface (BRI). The material covers various embodiments (bindings) of BRI, such as locally callable C and C++ APIs (known as BfRt) as well as remotely callable gRPC interface (BF Runtime). The latter are also used as the basis of writing PTF tests. Commonality of approaches is emphasized, while the important differences are pointed out and explained. SDE initialization is demonstrated by explaining how to build a user-space daemon, using `bf_switchd` library.

This course is recommended to all data and control plane developers.

BA-1132 is a part of [Barefoot Academy Online](#) course series.

Course Goals

Upon the completion of the course, the students will:

1. Understand the principles of control plane API design, including benefits and shortcomings of various approaches
2. Understand the basic principles, concepts and objects behind Barefoot Runtime Interface
3. Understand the relationship between a variety of specific BRI embodiments, such as BfRt, BF-Runtime and bfrt-python
4. Learn about SDE initialization and how to build a basic switchd replacement daemon
5. Understand the structure of Packet Test Framework
6. Learn how to write PTF tests

Target Audience

This course is most suitable for practicing data plane and control plane designers, tasked with design and development of data plane and control plane programs for modern networking equipment. It does require attendees to have sufficient pre-requisite knowledge.

What is included?

The course fee includes the following:

- A 3-hour lecture (with short breaks) conducted online via Zoom (Zoom account associated with your work email address is required)
- Lecture and lab materials in PDF format (we highly recommend printing them before the start of the class)
- Two or five consecutive days of access to a personal, preconfigured lab VM (depending on the ticket)
- Online support by the instructor via a dedicated Slack channel

Pre-requisites

- Understanding of network and telecommunications architecture and protocols, specifically IP and IP Multicast, LAG and ECMP (BA-1001)
- Understanding of the basics of P4₁₆ language in TNA architecture (BA-1111, BA-1112 and BA-1113)
- Knowledge of fixed-function components and related APIs as discussed in BA-1121, BA-1122 and BA-1123.
- Understanding of the SDE Architecture (BA-1131)
- Knowledge of C and C++ languages, especially as it relates to embedded and NOS development
- Knowledge of Python language
- Experience in data or control plane design is extremely helpful
- Good and reliable Internet access for both online lectures and VM access is a must

Logistics

An event-specific link to ticket purchase site will be provided on both [Barefoot Academy page](#) as well as on [Customer Portal](#) and [FASTER Forum](#). If you do not have an account on the Customer Portal or FASTER Forum, please contact [Barefoot Sales](#) representative first to get the password and establish an account.

To attend an online presentation, you will need to create a **free Zoom account, associated with your work email address**. Upon the registration, you will receive a link to the online event. You will also receive an invitation to establish a Slack account for lab support, also **associated with your work email address**.

A high-speed internet connection is required to attend the online presentation. Call-in numbers for higher voice quality might be provided, depending on the region. Please, connect to the online meeting 15 minutes before the start to work out all potential connection problems.

All necessary materials, including the presentation PDFs and lab exercises will be available through the Customer Portal or FASTER Forum a day before the start of the class. We highly recommend that you print the presentation PDFs and use them to take notes. Alternatively, these presentations can be loaded on a tablet, where the notes can be taken with an electronic pen.

The information about the lab Virtual Machines will be provided at the end of the lecture. VMs will be kept running for the next two or five days, depending on the ticket type. This time can be extended through a separate arrangement.
